### MOTOR VEHICLE TRANSPORT ACT, 1987, PART II TRUCK APPLICATIONS:

The following are applications for extra-provincial truck transport operating licences under Part II of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These Applicants have been found to meet the fitness requirements pursuant to Section 8(2) of that Act and the provincial transport board for Ontario proposes to issue the licences if no objection is served on the Applicant and filed with the Registrar of Motor Vehicles with the prescribed filing fee, within twenty-nine days of this publication.

### EXTRA-PROVINCIAL APPLICATIONS:

**NOTE:** Where the application is for a licence other than a corridor operating authority, an interested person who serves and files an objection must also provide the Ontario Highway Transport Board with written evidence, within thirty-nine days of this publication that satisfies that Board that, in the absence of evidence to the contrary, the operation of the undertaking in respect of which the licence is sought would likely be detrimental to the public interest.

## MOTOR VEHICLE TRANSPORT ACT, 1987

### INTRA-PROVINCIAL TRUCK APPLICATIONS:

The following are applications for operating licences under Part III of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These applicants have been found to meet the fitness requirement in like manner to section 6 of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and the provincial transport board for Ontario proposes to issue the licences unless a person, within thirty days of this publication, serves on the Applicant and files with the Registrar of Motor Vehicles with the prescribed filing fee, a written request for a fitness hearing or a public interest test in like manner to Subsection 7(4) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64.

**NOTE:** A person who requests a public interest hearing must, within thirty-nine days of this publication, serve on the Ontario Highway Transport Board a document that makes out a written case to the Board that the granting of the operating authority applied for would be likely to have a significant detrimental effect on the public interest using the criteria set out in subsection 10(1) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and that the request is not frivolously made.

\* Indicates a person who has applied for licences under both Part II and Part III of the Motor Vehicle Transport Act, 1987.

O.C. 2601/89

On the recommendation of the undersigned, the Lieutenant Governor, by and with the advice and concurrence of the Executive Council, orders that

WHEREAS in and by chapter 425 of the Revised Statutes of Ontario, 1980, entitled the *Public Vehicles Act*, it is enacted that the Lieutenant Governor in Council may by order from time to time issue policy statements setting out matters to be considered by the Ontario Highway Transport Board when determining questions of public necessity and convenience and the Ontario Highway Transport Board shall take such matters into consideration together with such other matters as the Ontario Highway Transport Board considers appropriate where the application or reference is made after the policy statement is gazetted;

NOW THEREFORE the Ontario Highway Transport Board when determining questions of public necessity and convenience in relation to applications for authority to operate intercity bus services intended to replace VIA Rail passenger services which have been targeted for termination or frequency reductions by the Government of Canada, shall take into consideration the following:

1. The preparedness and ability of the applicant to mobilize adequate quantity and quality of resources prior to the effective date of VIA Rail service reductions, such that interruption in service to the travelling public is minimized.
2. The ability and willingness of the applicant to offer a routing and service level which provides reasonable convenience for access and egress of passengers along the VIA Rail corridor being replaced. The proposed service may interface with other transportation services which in combination provide a reasonable alternative to the railway service.
3. The commitment of the applicant to providing innovative aspects in the proposed service, allowing passengers a quality of service which approaches, matches or exceeds that provided by VIA Rail on the passenger service question.

In addition, it is highly desirable to have the Ontario Highway Transport Board deal with such applications as matters of the utmost urgency, facilitating and expediting to the extent possible the administrative processes involved, including the scheduling and conduct of public hearings and determination of public necessity and convenience.

## ENVIRONMENTAL ASSESSMENT ACT

### O. Reg. 627/89.

Exemption—Ministry of the  
Environment—MOE-39.

Made—November 3rd, 1989.

Approved—November 3rd, 1989.

Filed—November 9th, 1989.

### ORDER MADE UNDER THE ENVIRONMENTAL ASSESSMENT ACT

#### EXEMPTION—MINISTRY OF THE ENVIRONMENT—MOE-39

Having received a request from the Regional Director, Southwestern Region, Ministry of the Environment, that an undertaking, namely:

The clean-up of the property known as the Genemark or the Dominion Barrel and Drum Site, located on Highway #3 partly in the Township of Maidstone and partly in the Town of Essex, and any adjacent areas,

be exempt from the application of the Act pursuant to section 29; and

Having been advised by the Regional Director that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons and property indicated will occur:

A. The time which would be involved in preparing an Environmental Assessment and seeking approval under the Act would significantly delay the implementation of the undertaking, exacerbating the following situations:

- (i) Contaminants on the property could further migrate to nearby soils, gravels and bedrock,
- (ii) Members of the public may be exposed to any contaminants from the property.

The undersigned is of the opinion that it is in the public interest to order and orders that the undertaking is exempt from the application of the Act for the following reasons:

- A. Any further delay in commencing clean-up could result in:
  - (i) Contaminants migrating offsite.
  - (ii) Members of the public being exposed to contaminants.
- B. Implementation of the undertaking as soon as possible will avoid further potential public exposure to, and possible migration of, contaminated wastes.
- C. The Regional Director will ensure that the environment is protected from additional contamination during clean-up.

This exemption is subject to the following terms and conditions:

1. The Ministry will inform The Corporation of the Town of Essex and The Corporation of

the Township of Maidstone before the commencement of the undertaking.

2. The undertaking shall be monitored by the Ministry of the Environment or its agents or both, to ensure that the clean-up activities do not result in injury or damage to persons and property.
3. A written report shall be prepared on the undertaking. The report shall describe the activities and how the terms and conditions of this order were complied with. The report shall be submitted by the Regional Director, Southwestern Region of the Ministry of the Environment, to the Director of the Environmental Assessment Branch for filing in the public records maintained for the purposes of section 31 of the Act. This report is to be received by the Director of the Environmental Assessment Branch six months after completion of the clean-up. O. Reg. 627/89.

## **MOTOR VEHICLE TRANSPORT ACT, 1987/ LOI DE 1987 SUR LE TRANSPORT PAR VÉHICULE À MOTEUR**

### **INTRA-PROVINCIAL TRUCK APPLICATIONS:**

The following are applications for operating licences under Part III of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These applicants have been found to meet the fitness requirement in like manner to section 6 of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and the provincial transport board for Ontario proposes to issue the licences unless a person, within thirty days of this publication, serves on the Applicant and files with the Registrar of Motor Vehicles with the prescribed filing fee, a written request for a fitness hearing or a public interest test in like manner to Subsection 7(4) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64.

**NOTE:** A person who requests a public interest hearing must, within thirty-nine days of this publication, serve on the Ontario Highway Transport Board a document that makes out a written case to the Board that the granting of the operating authority applied for would be likely to have a significant detrimental effect on the public interest using the criteria set out in subsection 10(1) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and that the request is not frivolously made.

\* Indicates a person who has applied for licences under both Part II and Part III of the Motor Vehicle Transport Act, 1987.

of the Workers' Compensation Act  
R.S.O. 1980, c. 539, as amended;

AND IN THE MATTER OF the  
IDSP Progress Report on  
Health Effects of Aluminum in the Workplace

### **REQUESTS FOR SUBMISSIONS**

Section 86(p) of the Workers' Compensation Act provides for the creation of an Industrial Disease Standards Panel (the Panel). It is the function of the Panel to:

- (a) investigate possible industrial diseases;
- (b) make findings as to whether a probable connection exists between a disease and an industrial process, trade or occupation in Ontario;
- (c) create, develop and revise criteria for the evaluation of claims respecting industrial diseases; and,
- (d) advise on eligibility rules regarding compensation for claims respecting industrial diseases.

In a letter dated December 16, 1988, Dr. Elgie, Chairman, Workers' Compensation Board, requested the Industrial Disease Standards Panel investigate the possibility that workplace exposure to aluminum results in industrial disease.

On October 20, 1989, Dr. Dupré, Chairman, Industrial Disease Standards Panel provided the Workers' Compensation Board with a **progress** report on the health effects of aluminum in the workplace in the form of the letter which follows. The attachments to the letter consisted of two extensive documents:

- (i) Literature Review (Health Effects of Aluminum in the Workplace, L.F. Smith, Industrial Disease Standards Panel, September 9, 1989).
- (ii) Health Effects of Aluminum in the Workplace: Reviewers' Comments.

These documents are available on request from the Industrial Disease Standards Panel and can be obtained by contacting Dr. James Heller, Executive Administrator, Industrial Disease Standards Panel, 10 King Street East, 7th Floor, Toronto, Ontario M5C 1C3 - 965-5056.

In accordance with sub-section 86p(11) of the Workers' Compensation Act, the Board has published this notice. Comments, briefs and submissions must be filed with the Workers' Compensation Board within six months of the date of this notice. All comments, briefs and submissions relatd to this progress report should be sent to Ms. Linda Angove, Secretary of the Board, Workers' Compensation Board, 2 Bloor Street East, 20th Floor, Toronto, Ontario M4W 3C3.

The final report of the Industrial Disease Standards Panel on the Health Effects of Aluminum in the Workplace will be published upon receipt by the Workers' Compensation Board and, in accordance with sub-section 86p(11) of the Workers' Compensation Act, the Board will request written comments, briefs and submissions from any interested parties.

Dr. R.G. Elgie  
Chairman  
Workers' Compensation Board  
2 Bloor Street East, 20th Floor  
Toronto, Ontario

Dear Dr. Elgie:

In a letter dated December 16, 1988, you requested that the Industrial Disease Standards Panel investigate the possibility that workplace exposure to aluminum results in industrial disease. I am writing at this time to provide a progress report concerning the Panel's investigation of this issue. The paragraphs that follow were reviewed at Panel's October 18th Meeting and endorsed by all Members present (Panel Members Buck, Chong, Dupré, Gibson, Hess, Jolley and Miller).

Panel staff have produced a literature review of the scientific evidence on aluminum health effects. This review has been vetted by recognized external experts on the health effects of aluminum in the workplace. These experts were: Dr. N.M. Cherry (Neurobehavioral Research Unit, McGill University; Dr. W.K.C. Morgan (University Hospital, University of Western Ontario); Dr. P.S. Spencer (Center for Research on Occupational and Environmental Toxicology, Oregon Health Sciences University); and Dr. G. Thériault, School of Occupational Health, McGill University). These experts supported the conclusions of the literature review and made specific suggestions designed to enhance its comprehensiveness. These suggestions are appended, along with the revised literature review, to this letter.

The scientific evidence linking aluminum exposure with disease that

emerges from this literature review can be summarized as follows:

DISEASE	INDUSTRY AND/OR EXPOSURE
A. Lung Disease	
1. Pulmonary Fibrosis	Pyrotechnics Industry and mainly of historical interest only (free aluminum coated in mineral oil)
2a. Pulmonary Alveolar Proteinosis (PAP)	Non-specific responses to high levels of all dusts of which aluminum may be a component
2b. Desquamative Interstitial Pneumonia (DIP)	
2c. Pulmonary Granulomatosis (PG)	
B. Neurological Disease	
3. Dialysis Encephalopathy Syndrome (DES)	Aluminum antacids or aluminum-containing dialysis water (and only in persons with renal failure on or not on dialysis)

Your letter of December 16th raised the aluminum health issue in the context of "the assertion that workers with elevated serum aluminum levels are experiencing neurological and other health problems. The workers are exposed to aluminum dust, the airborne levels of which are below the level currently established by the Ministry of Labour."

The assertion and the workers to whom your letter refers involve two Ontario aircraft plants: the McDonnell Douglas plant in Mississauga and the Boeing-de Havilland plant in Downsview. Our literature review, as summarized above, sheds no light on the possibility of aluminum-related disease in the aircraft industry, and for that matter in secondary manufacturing generally.

With respect to lung disease, the literature review reveals that pulmonary fibrosis was limited to the pyrotechnics industry in the secondary manufacturing sector during the forties and fifties. During that time, a method of manufacturing explosives (using finely divided aluminum powder coated with a non-polar mineral oil) was briefly adopted in England, Germany and Sweden and was subsequently discontinued. The reported cases of pulmonary fibrosis (or 'aluminosis') from this industry resulted from the inhalation of this

mineral oil-coated free aluminum. In the watery tissue of the lung, the coating would dissolve and an exothermic reaction would result from the contact of the unbound aluminum with water. The lung fibrosis likely resulted from the heat released during this reaction.

As for pulmonary alveolar proteinosis (PAP), desquamative interstitial pneumonia (DIP) and pulmonary granulomatosis (PG), the literature review indicates that these lung diseases have resulted, whether in primary or secondary manufacturing industries, from generalized and severe dust exposure. Aluminum is a prominent constituent of most dust. However, the literature considers that PAP, DIP and PG result from the severity of the generalized dust insult and not from the aluminum.

With respect to neurological disease, the literature review confirms the existence of a single aluminum-related condition called dialysis encephalopathy syndrome (DES). But this condition, as its name indicates, has no association whatsoever with occupational exposure of any kind. It arises among patients suffering kidney failure either from the ingestion of aluminum-containing antacids, or from the presence of aluminum in the dialysate or water used during dialysis to cleanse the blood.

Beyond the literature review, the Panel has reviewed a substantial proportion of the claims for compensation for industrial disease from both plants filed with the Board during the 1986-88 time period. This exercise uncovered no evidence of either lung disease or central nervous system (CNS) disorders which was explainable by aluminum exposure. However, there have been numerous instances of irritations (to the skin, eyes, lungs, etc.) arising from acute solvent exposure. And several claims were identified for symptoms of CNS problems (viz. dizziness, giddiness, headaches, etc.) also arising from acute solvent exposure.

The fact that the reviews of the scientific literature and the disease claims from the aircraft plants have not uncovered evidence linking aluminum to adverse health effects in manufacturing is not conclusive.

There is the possibility that currently ongoing research may yield evidence associating aluminum exposure in the workplace with diseases or their precursors. The Northern Ontario Miners' Study, under the direction of University of Toronto researchers, is examining all possible health effects among these miners including any possible evidence linking neurological disorders with aluminum prophylaxis. The evidence from this study may be supplemented by a reexamination of the data in the Mining Master File previously maintained by the Board which may contain some hitherto unidentified association between aluminum prophylaxis treatment of Ontario miners and non-malignant

respiratory diseases. The Panel is aware of research being conducted under the auspices of the Aluminum Association to examine the relationship between occupational aluminum dust and fume exposure and blood and urine aluminum concentrations.

The Panel is closely monitoring all these initiatives. In addition, the Panel is aware that the Ministry of Labour is exploring a possible health study of aircraft workers.

Whether or not the above activities yield further light on aluminum as a disease-producing agent, what the literature and claims' reviews do suggest is that allegations of disease in the aircraft industry should be investigated in relation to substances other than aluminum. The Panel has visited the McDonnell Douglas and Boeing-de Havilland plants and can confirm that concern and anxiety among aircraft workers are genuine. The Panel therefore has an interest in exploring the extent of the diseases and symptoms that are at the root of these anxieties.

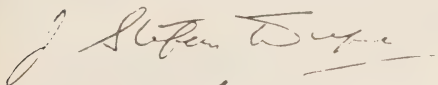

In pursuing this interest, the Panel has learned that, at the Boeing Company in Seattle, Washington, there are alleged neurological disorders among aircraft workers which have not been associated with aluminum exposure. Confirmation of diseases or symptoms in the aircraft industry is vitally important, as is an exploration of a variety of possible disease-inducing agents in that industry. Such agents might be any of a number of solvents, glues or resins. It has already been confirmed that a serious matter of isocyanate exposure and consequent occupational asthma has existed in this industry. It is well known that exposure to some of these chemical substances can lead to cognitive deficits and other sorts of neurobehavioural and neuropsychological problems. The Panel is also aware that, in an effort to achieve greater fuel economy through the use of lighter weight components, the aircraft industry is turning increasingly to the use of graphite composites as substitutes for aluminum. These composites are often in the form of resin-impregnated fibres. Their use in the aircraft industry has been reported to be associated with neurological disorders of the sort which have been alleged in our own Ontario aircraft industry. Accordingly, a delegation of the Panel intends to visit the Boeing Company in Seattle at the earliest opportunity to meet with labour and management representatives and with researchers from the University of Washington. This visit will shed light on the issue of alleged neurological disorders among aircraft workers arising from exposure to resin-impregnated graphite composites.

As for the Ontario aircraft plants, the Panel is examining Ministry hygiene surveys for the nature and extent of all exposure to potentially hazardous substances, especially neurotoxic substances. The Panel is also assessing the availability of clinical information that has been collected from workers in these plants.

To conclude, the current state of Panel's progress with what began as a Board reference concerning aluminum-related disease in the workplace indicates the need to work toward an eventual report concerning health effects among Ontario aircraft workers resulting from exposures to a variety of substances. Through this letter to you, the Panel wishes to share the extent of its current evidence and of proposed initiatives with the Board and all interested parties.

Yours sincerely,

J. Stefan Dupré  
Chairman

##### APPLICATION FOR SPECIAL LEGISLATION

NOTICE IS HEREBY GIVEN that, on behalf of The Corporation of the City of Toronto, application will be made to the Legislative Assembly of the Province of Ontario, for an Act to provide:

1. That in passing by-laws to allow parking of motor vehicles on designated public streets pursuant to permits issued to the owners of the vehicles (permit parking by-laws), that prior to passing such a by-law, notice of a poll and notice of the Council's intention to pass the by-laws shall be sent to all persons listed on the assessment roll for the land abutting the parts of the highway to be designated, and that provided that a majority of the poll notices received by the City Clerk within one month following the latest date of mailing of the poll is in favour of the proposed by-law, the Council may pass the by-law.

The existing permit parking legislation for the City of Toronto presently requires that before passing a permit parking by-law, notices of the Council's intention to pass the by-law shall be sent to all persons on the last assessment roll for land abut-

## MOTOR VEHICLE TRANSPORT ACT, 1987/ LOI DE 1987 SUR LES TRANSPORT ROUTIERS

### MOTOR VEHICLE TRANSPORT ACT, 1987, PART II TRUCK APPLICATIONS:

The following are applications for extra-provincial truck transport operating licences under Part II of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These Applicants have been found to meet the fitness requirements pursuant to Section 8(2) of that Act and the provincial transport board for Ontario proposes to issue the licences if no objection is served on the Applicant and filed with the Registrar of Motor Vehicles with the prescribed filing fee, within twenty-nine days of this publication.

### EXTRA-PROVINCIAL APPLICATIONS:

**NOTE:** Where the application is for a licence other than a corridor operating authority, an interested person who serves and files an objection must also provide the Ontario Highway Transport Board with written evidence, within thirty-nine days of this publication that satisfies that Board that, in the absence of evidence to the contrary, the operation of the undertaking in respect of which the licence is sought would likely be detrimental to the public interest.

### INTRA-PROVINCIAL TRUCK APPLICATIONS:

The following are applications for operating licences under Part III of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These applicants have been found to meet the fitness requirement in like manner to section 6 of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and the provincial transport board for Ontario proposes to issue the licences unless a person, within thirty days of this publication, serves on the Applicant and files with the Registrar of Motor Vehicles with the prescribed filing fee, a written request for a fitness hearing or a public interest test in like manner to Subsection 7(4) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64.

**NOTE:** A person who requests a public interest hearing must, within thirty-nine days of this publication, serve on the Ontario Highway Transport Board a document that makes out a written case to the Board that the granting of the operating authority applied

for would be likely to have a significant detrimental effect on the public interest using the criteria set out in subsection 10(1) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and that the request is not frivolously made.

\* Indicates a person who has applied for licences under both Part II and Part III of the Motor Vehicle Transport Act, 1987.

### CITY OF TORONTO

#### APPLICATION FOR SPECIAL LEGISLATION

NOTICE IS HEREBY GIVEN that, on behalf of The Corporation of the City of Toronto, application will be made to the Legislative Assembly of the Province of Ontario, for an Act to provide:

1. That in passing by-laws to allow parking of motor vehicles on designated public streets pursuant to permits issued to the owners of the vehicles (permit parking by-laws), that prior to passing such a by-law, notice of a poll and notice of the Council's intention to pass the by-laws shall be sent to all persons listed on the assessment roll for the land abutting the parts of the highway to be designated, and that provided that a majority of the poll notices received by the City Clerk within one month following the latest date of mailing of the poll is in favour of the proposed by-law, the Council may pass the by-law.

The existing permit parking legislation for the City of Toronto presently requires that before passing a permit parking by-law, notices of the Council's intention to pass the by-law shall be sent to all persons on the last assessment roll for land abutting the parts of the highway to be designated for permit parking, and unless a petition objecting to the passing of the by-law, signed by at least  $\frac{2}{3}$  of the persons entitled to notice, is received by the Clerk within one month of the last date of mailing the notice, the Council may pass the by-law.

2. That where the Council has proceeded under the legislation and has been prevented from passing the permit parking by-law by reason of a majority of poll notices received not being in favour of the passing of the by-law, the council may if it wishes, upon the expiry of two years after the polling period has been completed, again implement the permit parking poll process for that highway.

The present legislation requires that if at least  $\frac{2}{3}$  of the persons entitled to notice petition against the by-law, the Council cannot pass the by-law, and that if the Council is prevented from passing the by-law as aforesaid, it can re-new the process for implement permit parking on that highway after a two year period has passed.

This application will be considered by a Standing Committee of the Legislative Assembly. Any person who has an interest in the application and who wishes to make submissions, for or against the application, to the Standing Committee should notify, in writing, the Clerk of the Legislative Assembly, Queen's Park, Toronto, Ontario M7A 1A2.

### MOTOR VEHICLE TRANSPORT ACT, 1987, PART II TRUCK APPLICATIONS:

The following are applications for extra-provincial truck transport operating licences under Part II of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These Applicants have been found to meet the fitness requirements pursuant to Section 8(2) of that Act and the provincial transport board for Ontario proposes to issue the licences if no objection is served on the Applicant and filed with the Registrar of Motor Vehicles with the prescribed filing fee, within twenty-nine days of this publication.

### EXTRA-PROVINCIAL APPLICATIONS:

**NOTE:** Where the application is for a licence other than a corridor operating authority, an interested person who serves and files an objection must also provide the Ontario Highway Transport Board with written evidence, within thirty-nine days of this publication that satisfies that Board that, in the absence of evidence to the contrary, the operation of the undertaking in respect of which the licence is sought would likely be detrimental to the public interest.

\* Indicates a person who has applied for licences under both Part II and Part III of the Motor Vehicle Transport Act, 1987.

ter 64, and the provincial transport board for

# AVIS PUBLIC

“Demandes d'exploitation d'une entreprise de camionnage présentées en vertu des parties II et III de la LOI DE 1987 SUR LES TRANSPORTS ROUTIERS”

Le requérant mentionné ci-après a présenté une demande de licence en vertu des parties II et III de la Loi de 1987 sur les transports routiers. Les demandes ont été publiées dans la Gazette de l'Ontario du 14 octobre 1989.

Les avis d'objection et la preuve écrite ont été joints à cette demande et déposés par les intéressés dans les délais prescrits. La Commission des transports routiers de l'Ontario a pris en considération la preuve déposée et estime que, faute de preuve contraire, l'exploitation de l'entreprise de camionnage faisant l'objet d'une demande de licence serait sans doute préjudiciable à l'intérêt public.

Par conséquent, la commission a décidé qu'une audience publique aurait lieu dans la salle de tribunal de la commission, Britannica House, 151, rue Bloor ouest, 10e étage, Toronto, Ontario, tel qu'indiqué ci-après :

Pour de plus amples renseignements sur cette audience, s'adresser au secrétaire de la commission.

## DATE DE L'AUDIENCE :

*Les 1er et 2 février 1990*

**Provincial-American Truck

### **CITY OF TORONTO**

#### **APPLICATION FOR SPECIAL LEGISLATION**

NOTICE IS HEREBY GIVEN that, on behalf of The Corporation of the City of Toronto, application will be made to the Legislative Assembly of the Province of Ontario, for an Act to provide:

1. That in passing by-laws to allow parking of motor vehicles on designated public streets pursuant to permits issued to the owners of the vehicles (permit parking by-laws), that prior to passing such a by-law, notice of a poll and notice of the Council's intention to pass the by-laws shall be sent to all persons listed on the assessment roll for the land abutting the parts of the highway to be designated, and that provided that a majority of the poll notices received by the City Clerk within one month following the latest date of mailing of the poll is in favour of the proposed by-law, the Council may pass the by-law.

The existing permit parking legislation for the City of Toronto presently requires that before passing a permit parking by-law, notices of the Council's intention to pass the by-law shall be sent to all persons on the last assessment roll for land abutting the parts of the highway to be designated for permit parking, and unless a petition objecting to the passing of the by-law, signed by at least  $\frac{2}{3}$  of the persons entitled to notice, is received by the Clerk within one month of the last date of mailing the notice, the Council may pass the by-law.

2. That where the Council has proceeded under the legislation and has been prevented from passing the permit parking by-law by reason of a majority of poll notices received not being in favour of the passing of the by-law, the council may if it wishes, upon the expiry of two years after the polling period has been completed, again implement the permit parking poll process for that highway.

The present legislation requires that if at least  $\frac{2}{3}$  of the persons entitled to notice petition against the by-law, the Council cannot pass the by-law, and that if the Council is prevented from passing the by-law as aforesaid, it can re-new the process for implement permit parking on that highway after a two year period has passed.

This application will be considered by a Standing Committee of the Legislative Assembly. Any person who has an interest in the application and who wishes to make submissions, for or against the

application, to the Standing Committee should notify, in writing, the Clerk of the Legislative Assembly, Queen's Park, Toronto, Ontario M7A 1A2.

(13) Each direct discharger shall, with respect to each method, device or calculation for flow measurement or estimation to be used in meeting the requirements of subsections 14 (3) and (4), submit to the Director, no later than thirty days before the first use of the method, device or calculation for the purposes of this Regulation, documentation sufficient to satisfy the Director that the method, device or calculation

complies with the accuracy requirements of subsection 6 (6) of the General Effluent Monitoring Regulation.

(14) Each direct discharger shall submit to the Director documentation of each calibration performed under subsection 6 (7) of the General Effluent Monitoring Regulation, within thirty days after the calibration was performed or within thirty days after this Regulation comes into force.

(15) Each direct discharger shall report to the Director the flow measurement information required to be recorded under subsections 14 (1) to (4) in respect of each process effluent stream, combined effluent stream, cooling water effluent stream and storm water effluent stream of that discharger, together with the date on which each flow was measured.

(16) Each direct discharger shall submit to the Director a description of any methods, devices or calculations used in estimating the volume of a discharge of effluent under subsection 14 (2), together with an assessment of the accuracy of those methods, devices or calculations, within sixty days after each such estimation.

(17) If the Table in subsection 3 (2) indicates that storm event reporting is required in relation to a direct discharger's plant, the discharger shall report to the Director the date, approximate duration and amount of rainfall of each storm event in relation to that plant that occurs during the period beginning on the 1st day of May, 1990 and ending on the 30th day of April, 1991, within sixty days after each such storm event.

(18) Each direct discharger shall submit to the Director, at least thirty days before the collection of the first sample in each month under sections 5, 9 and 10, a schedule of intended sampling dates by sampling point location for all sampling to be done under those sections.

(19) Each direct discharger shall make every reasonable effort to follow the schedule submitted under subsection (18) but if the schedule cannot be followed as submitted, the discharger shall notify the Director promptly of any change in dates.

(20) Within thirty days after the end of each quarter, each direct discharger shall submit a report to the Director summarizing the quantities of chemicals added to each cooling water effluent stream of that discharger from which samples were collected under section 10 in the quarter, and stating the dates on which these additions occurred.

(21) Each direct discharger shall, no later than the 1st day of June, 1991, submit a report to the Director describing the variation in daily flow for the period beginning the 1st day of May, 1990 and ending the 30th day of April, 1991, of each process effluent stream from which samples are collected under this Regulation other than by means described in clauses 3 (4) (a), (b) and (c) of the General Effluent Monitoring Regulation.

(22) The report referred to in subsection (21) shall include the raw data and calculation methods used to produce the report.

(23) Each direct discharger shall keep records of all sampling required by this Regulation, including, for each sample, the date of collection, the sampling procedures used, the amount of sample dilution by preservative if dilution exceeds 1 per cent and any incident likely to affect an analytical result.

(24) Each direct discharger shall record the results of all maintenance and calibration performed on sampling equipment used in meeting the requirements of this Regulation.

(25) Each direct discharger shall keep records of all analytical methods used in meeting the requirements of this Regulation.

(26) Each direct discharger shall submit a report to the Director detailing the date, duration and cause of each sampling, toxicity testing, analytical and flow measurement malfunction or problem that interferes with fulfilling the requirements of this Regulation, together with a description of any remedial action

taken, within sixty days after the day on which the malfunction or problem occurs.

(27) Each direct discharger shall keep all records and reports required by this Regulation to be kept or made for a period of two years following the date of the last report submitted to the Director under this section. O. Reg. 648/89, s. 16.

COMMENCEMENT

17.—(1) This Regulation, except sections 5 to 13, subsections 14 (1) to (4) and section 15, comes into force on the day on which it is filed.

(2) Sections 5 to 13 and subsections 14 (1) to (4) come into force on the 1st day of May, 1990.

(3) Section 15 comes into force on the 1st day of May, 1991.

REVOCATION

18.—(1) Sections 5 to 13 are revoked on the 1st day of May, 1991.

(2) Subsections 14 (1) to (4) and section 15 are revoked on the 1st day of May, 1992.

ENVIRONMENTAL PROTECTION ACT

O. Reg. 649/89.  
Effluent Monitoring—Inorganic Chemical  
Sector.  
Made—November 30th, 1989.  
Filed—November 30th, 1989.

REGULATION TO AMEND  
ONTARIO REGULATION 395/89  
MADE UNDER THE  
ENVIRONMENTAL PROTECTION  
ACT

1. Subsection 1 (1) of Ontario Regulation  
395/89 is amended by adding thereto  
the following definition:

“storm event”, in relation to a plant, means a rainfall  
or series of rainfalls on an operating day that in

total exceeds five millimetres as measured by an on-  
site rain gauge, an automated recording rain gauge  
located within eight kilometres of the plant or an  
Environment Canada meteorological station  
located within eight kilometres of the plant.

2.—(1) Subsections 3 (1) and (2) of the  
said Regulation are revoked and the  
following substituted therefor:

(1) This Regulation applies only with respect to the  
plants mentioned in subsection (2a) and only with  
respect to effluent streams named in the site-specific  
monitoring schedules for those plants.

(2) For the purposes of this Regulation, the plants  
listed in Table 1 in subsection (2a) are in Category 1  
and the plants listed in Table 2 in subsection (2a) are  
in Category 2.

(2a) The site-specific monitoring schedule for each  
plant is as follows:

O. Reg. 649/89, s. 2 (1).

(2) Section 3 of the said Regulation is amended by adding thereto the following subsections:

(9) Each direct discharger shall ensure that there is an automated recording rain gauge to which the discharger has ready access at all times within eight kilometres of the discharger's plant, unless there is either a rain gauge at the plant or an Environment Canada meteorological station within eight kilometres of the plant.

(10) Subsection 3 (29) of the General Effluent Monitoring Regulation does not apply where a direct discharger is governed by this Regulation.

(11) In addition to complying with subsection 3 (19) of the General Effluent Monitoring Regulation, each direct discharger shall use only sampling equipment for the collection of samples, the wettable surfaces of which are made of fluorocarbon resins, glass, stainless steel, high or low density polyethylene, polyethylene terephthalate, polystyrene or polypropylene for samples that are to be analyzed for parameters in analytical test groups IC1 to IC3 as set out in Schedule AA to this Regulation.

(12) Despite subsection (11), a direct discharger may use sampling devices that contain a short section of surgical grade silicone rubber tubing or other tubing approved by the Director if such tubing cannot be replaced by a material mentioned in subsection (11) without impairing the operation of the device.

(13) For the purposes of subsections 3 (22), (25a) and (26) of the General Effluent Monitoring Regulation,

- (a) a sample collected for analysis for parameters in more than one analytical test group as set out in the Schedules to this Regulation is deemed to be a sample collected for analysis for parameters in more than one analytical test group in Schedule 1 to the General Effluent Monitoring Regulation; and
- (b) a laboratory sample container specified in Column 2 of Schedule BB to this Regulation is deemed to be a laboratory sample container specified in Column 2 of Schedule 2 to the General Effluent Monitoring Regulation.

(14) Instead of the minimum sample volumes specified in Column 5 of Schedule BB, a direct discharger

may, in relation to a sample to be analyzed, submit to the laboratory performing the analysis the minimum sample volume required by the laboratory to meet the analytical method detection limits set out in Column 6 of Schedule CC. O. Reg. 649/89, s. 2 (2).

3.—(1) Subsection 4 (1) of the said Regulation is amended by inserting after “discharger” in the first line “whose plant is in Category 1”.

(2) Paragraph 1 of the said subsection 4 (1) is amended by inserting after “discharge” in the first line “effluent”.

(3) Section 4 of the said Regulation is amended by adding thereto the following subsection:

(1a) Each direct discharger whose plant is in Category 2 shall, by the 1st day of January, 1990, establish a sampling point on each effluent stream named in the site-specific monitoring schedule for that discharger's plant as follows:

1. A batch discharge effluent sampling point on each batch discharge effluent stream.
2. A combined effluent sampling point on each combined effluent stream.
3. A final discharge sampling point on each process effluent, combined effluent or batch discharge effluent stream.
4. A once-through cooling water sampling point on each once-through cooling water effluent stream.
5. A process effluent sampling point on each process effluent stream.
6. A storm water sampling point on each storm water effluent stream.
7. A waste disposal site effluent sampling point on each waste disposal site effluent stream.
8. An emergency overflow effluent sampling point on each emergency overflow effluent stream. O. Reg. 649/89, s. 3 (3).

(4) Subsection 4 (2) of the said Regulation is amended by striking out “subsection (1)” in the second line and inserting in lieu thereof “subsections (1) and (1a)”.

(5) Subsection 4 (6) of the said Regulation is amended by adding at the end thereof “and in Column 6 of Schedule CC to this Regulation”.

4. Subsection 11 (1) of the said Regulation is amended by inserting after “storm event” in the sixth line “or thaw”.

5.—(1) Subsection 14 (2) of the said Regulation is amended by striking out “(3) and (4)” in the first line and inserting in lieu thereof “(3), (4) and (11)”.

(2) Subsections 14 (3) to (9) of the said Regulation are revoked and the following substituted therefor:

(3) Once in each month, on a day on which samples are collected under section 9 from the sampling point on the process effluent or combined effluent stream indicated as requiring quality control monitoring in the site-specific monitoring schedule for that discharger's plant, if any stream is so indicated, each direct discharger shall collect a duplicate sample for each sample collected on that day from that sampling point under sections 6 and 7, and shall analyze the set of duplicate samples for the parameters indicated in the daily and thrice-weekly columns, for the stream from which the set was collected, of the site-specific monitoring schedule for that discharger's plant.

(4) Once in each quarter, on a day on which duplicate samples are collected under subsection (3), each direct discharger shall collect a duplicate sample for each sample collected on that day under sections 8 and 9 from the sampling point on the process effluent or combined effluent stream indicated as requiring quality control monitoring in the site-specific monitoring schedule for that discharger's plant, if any stream is so indicated, and shall analyze the set of duplicate samples for the parameters indicated in the weekly and monthly columns, for the stream from which the set was collected, of the site-specific monitoring schedule for that discharger's plant.

(5) Once in each month, on the day on which samples are collected under subsection (3), each direct discharger shall prepare a travelling blank sample for each sample collected on that day under sections 6 and 7 from the sampling point on the process effluent or combined effluent stream indicated as requiring quality control monitoring in the site-specific monitoring schedule for that discharger's plant, if any stream is so indicated, and shall analyze the set of travelling blank samples for the parameters indicated in the daily and thrice-weekly columns, for the stream from which the samples for which the travelling blank samples were prepared were collected, of the site-specific monitoring schedule for that discharger's plant.

(6) Despite subsections (5), (7) and (12), a direct discharger need not analyze a travelling blank sample for parameters in analytical test groups 3 and 8.

(7) Once in each quarter, on the day on which samples are collected under subsection (4), each direct discharger shall prepare a travelling blank sample for

each sample collected on that day under sections 8 and 9 from the sampling point on the process effluent or combined effluent stream indicated as requiring quality control monitoring in the site-specific monitoring schedule for that discharger's plant, if any stream is so indicated, and shall analyze the set of travelling blank samples for the parameters indicated in the weekly and monthly columns, for the stream from which the samples for which the travelling blank samples were prepared were collected, of the site-specific monitoring schedule for that discharger's plant.

(8) Once in each month, on the day on which samples are collected under subsection (3), each direct discharger shall prepare a travelling spiked blank sample for each sample collected on that day under sections 6 and 7 from the sampling point on the process effluent or combined effluent stream indicated as requiring quality control monitoring in the site-specific monitoring schedule for that discharger's plant, if any stream is so indicated, and shall analyze the set of travelling spiked blank samples for the parameters in analytical test groups 16 to 20, 23, 24 and 27 indicated in the daily and thrice-weekly columns, for the stream from which the samples for which the travelling spiked blank samples were prepared were collected, of the site-specific monitoring schedule for that discharger's plant.

(9) Once in each quarter, on the day on which samples are collected under subsection (4), each direct discharger shall prepare a travelling spiked blank sample for each sample collected on that day under sections 8 and 9 from the sampling point on the process effluent or combined effluent stream indicated as requiring quality control monitoring in the site-specific monitoring schedule for that discharger's plant, if any stream is so indicated, and shall analyze the set of travelling spiked blank samples for the parameters in analytical test groups 16 to 20, 23, 24 and 27 indicated in the weekly and monthly columns, for the stream from which the samples for which the travelling spiked blank samples were prepared were collected, of the site-specific monitoring schedule for that discharger's plant. **REGULATION TO AMEND  
REGULATION 881 OF  
REVISED REGULATIONS  
OF ONTARIO, 1980  
MADE UNDER THE  
PUBLIC SERVICE ACT**

1. The definition of "cash payment for a benefit" set out in subsection 1 (2) of Regulation 881 of Revised Regulations of Ontario, 1980, as made by section 1 of Ontario Regulation 24/86, is revoked and the following substituted therefor:

"cash payment for a benefit" includes any payment made on termination of employment under sections 86 to 92;

2. Section 15 of the said Regulation, as amended by section 1 of Ontario Regulation 328/82 and section 6 of Ontario Regulation 24/86, is revoked and the following substituted therefor:

15.—(1) In this section, "employee" means,

- (a) a civil servant who is a member of the architectural, dental, engineering, medical or legal profession, who is entitled to practise his or her profession in Ontario, and who is employed in his or her profession by the Crown in a position in a class set out in Schedule 6; and
- (b) a civil servant who is not described in clause (a) and who is in a position in a class set out in Schedule 6 that is neither a class for which a salary range is determined through collective bargaining under any Act nor a class that is in the excluded category.

(2) An employee is entitled to accumulate compensation option credits in each year for the portion of the year during which he or she is an employee at the rate of,

- (a) 5/12 of one credit per month in the year, if the employee is a full-time employee; and
- (b) that portion of 5/12 of one credit per month in the year that is equal to the portion that the employee's regularly scheduled hours of

work bear to full employment, if the employee is a part-time employee.

(3) The compensation option credits that an employee is entitled to accumulate in a year under subsection (2) shall be credited to the employee on the 1st day of January in the year or on the day in the year when the employee first becomes an employee, whichever is later.

(4) From the compensation option credits credited to an employee in a year in accordance with subsections (2) and (3) there shall be deducted, to a maximum of the credits credited to the employee in the year, credits at the rate set out in clause (2) (a) or (b), as the case requires, for,

- (a) each whole month in the year throughout which the employee is on leave of absence without pay;
- (b) each whole month in the year throughout which the employee receives benefits under the Long Term Income Protection Plan;
- (c) each whole month in the year throughout which the employee receives benefits under an award made under the *Workers' Compensation Act*, if that month is after the first six months for which the employee received benefits under that award, and if the employee is not receiving payment for accumulated attendance credits or accumulated vacation credits in that month;
- (d) each whole month in the year after the month in which the employee ceases to be an employee;
- (e) each whole month in the year throughout which the employee is on leave of absence with pay under subsection 93 (3) or (6), and for the month in the year, if less than a whole month, in which the leave of absence with pay ends; and
- (f) any month wholly comprised of consecutive periods of less than a month for which credit would be deducted under clauses (a) to (e) if the periods were whole months.

(5) With the approval of the employee's deputy minister, an employee may take leave of absence with pay in respect of some or all of the employee's accumulated compensation option credits at the rate of one day of leave of absence with pay for each compensation option credit to which the employee is entitled, and the employee's accumulated compensation option credits shall be reduced by the leave of absence with pay taken.

(6) If, after making any deduction required by subsection (4) or (5), an employee's accumulated compensation option credits at the end of a year exceed twenty, the excess shall be deducted from the employ-

ee's accumulated compensation option credits before compensation option credits for the next year are credited to the employee.

(7) Each day or part thereof by which a leave of absence with pay taken by a person under subsection (5) exceeds the person's accumulated compensation option credits after making any deduction required by subsection (4) or (6) shall be deducted from the person's vacation credits, and the person shall repay to the Crown the salary paid to him or her for any day or part thereof of the leave of absence with pay that cannot be so deducted.

(8) Any amount to be repaid under subsection (7) may be deducted from any payment the person is enti-

tled to receive from the Crown in respect of salary or termination of employment or otherwise.

(9) An employee is not entitled to be paid for any accumulated compensation option credits to which the employee remains entitled when the employee ceases to be an employee or when the employee commences a leave of absence with pay under subsection 93 (3) or (6). O. Reg. 650/89, s. 2.

3. Schedules 3, 4, 5, 6 and 7 to the said Regulation, as remade by section 2 of Ontario Regulation 129/89, are revoked and the following substituted therefor:

**INTRA-PROVINCIAL TRUCK APPLICATIONS:**

The following are applications for operating licences under Part III of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These applicants have been found to meet the fitness requirement in like manner to section 6 of the Truck Transportation Act, 1988, S.O. 1988, Chap-

ter 64, and the provincial transport board for Ontario proposes to issue the licences unless a person, within thirty days of this publication, serves on the Applicant and files with the Registrar of Motor Vehicles with the prescribed filing fee, a written request for a fitness hearing or a public interest test in like manner to Subsection 7(4) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64.

**NOTE:** A person who requests a public interest hearing must, within thirty-nine days of this publication, serve on the Ontario Highway Transport Board a document that makes out a written case to the Board that the granting of the operating authority applied for would be likely to have a significant detrimental effect on the public interest using the criteria set out in subsection 10(1) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and that the request is not frivolously made.

\* Indicates a person who has applied for licences under both Part II and Part III of the Motor Vehicle Transport Act, 1987.

## **Workers' Compensation Board of Ontario/ Commission des accidents du travail de l'Ontario**

IN THE MATTER OF Section 86p of the  
Workers' Compensation Act  
R.S.O., 1980, c. 539, as amended:

AND IN THE MATTER OF the findings of the  
Industrial Disease Standards Panel Report to  
the Workers' Compensation Board on the CGE  
Lamp Plant Issue

In accordance with Section 86p(14) of the Workers' Compensation Act, the Board is publishing this notice of its acceptance or rejection of the findings of the Industrial Disease Standards Panel (IDSP), with reasons therefor.

In late 1980 an apparent cluster (see Glossary of Terms\*) of breast and gynaecological disease (1 breast cancer, 2 hysterectomies, 1 ovarian cyst, 1 benign breast lump) was noted in a group of women working in the Coil and Wire Drawing (CWD) Department of the Canadian General Electric (CGE) Dufferin St. Lamp Plant.

The plant physician, Dr. Jack Richman, reported this cluster to the Ministry of Labour (MOL) on December 12, 1980, and in early 1981, it was officially reported to the Joint Occupational Health and Safety Committee (JOHSC) at the CGE Dufferin St. Plant by the union (United Electrical, Radio and Machine Workers of Canada). The JOHSC asked Dr. Richman to conduct further investigations, and in February, 1981, the MOL conducted an inspection of the plant.

Dr. Richman completed his study and finalized his report in 1982. He found that there was a significant increase of breast and gynaecological cancers in this worker population. He found 8 cancers (4 breast cancers, 3 uterine and cervical cancers combined and 1 ovarian cancer) in CWD area workers and 15 breast and gynaecological cancers in workers in other areas of the plant. The nature and degree of work-relatedness was not established in this study.

The Joint Occupational Health and Safety Committee agreed that a full epidemiological study should be conducted, and Dr. Harry Shannon of McMaster University was commissioned to head the study team. In the spring of 1983, the Union, company and Dr. Shannon finalized the study protocol. In August, 1983 the WCB and Ministry of Labour agreed to assist in funding the study.

The study was completed in 1986. All men and women at the lamp plant, including office workers, who worked there for a minimum of six months sometime between 1960

and 1975 were included in the study. Breast and gynaecological cancers in women of the CWD area were the main sites of concern since this is what prompted the study. The study concluded that there was a statistically significant\* excess of breast and gynaecological cancers combined among women who worked in the CWD Department. Of the 203 women who worked in the CWD area during the specified study period, 12 developed breast and/or gynaecological cancers (8 breast, 1 cervical, 2 uterine, and 1 ovarian cancer(s)) where 6.68 were expected.

The results of the study were presented to the workers on November 20, 1986. The Board also received a copy of the study in November, 1986, and by April, 1987 four CGE workers had submitted claims for compensation. On June 24, 1987 the Board referred the issue to the IDSP for advice on:

- a) Whether there was a probable connection between working in the CWD area of the CGE Lamp Plant and development of breast and gynaecological cancers;
- b) If so, what the likely workplace agent was; and
- c) The method of adjudication of claims.

In November, 1988 the Panel submitted its report to the WCB. In accordance with Section 86p(11) of the Workers' Compensation Act, the Board published the Panel's report in The Ontario Gazette. The deadline for submissions was May 19, 1989, and eight submissions were received.

## I. ISSUE OF PROBABLE CONNECTION

In regard to the issue of probable connection the IDSP did not reach a consensus and thus provided the Board with the following three choices:

- o Finding 1 by Panel Members Buck, Dupré, Gibson, LeVay, Miller and Stevens:

AT THIS TIME WE CANNOT MAKE A FINDING OF PROBABLE CONNECTION BETWEEN BREAST AND GYNAECOLOGICAL CANCERS AMONG CWD WORKERS AT THE CGE DUFFERIN ST. PLANT AND THEIR WORKPLACE. HOWEVER, THE EVIDENCE BEFORE US DOES NOT PRECLUDE THE POSSIBILITY OF WORK-RELATEDNESS. RESOLVING THE ISSUE BY EPIDEMIOLOGICAL MEANS REQUIRES A

STUDY WHICH, AT THE EARLIEST, IS UNLIKELY TO YIELD AN ANSWER BEFORE THE NEXT CENTURY.

o Finding 1a by Panel Members Gagnon and Jolley:

AT THIS TIME, WE FIND A PROBABLE CONNECTION BETWEEN CANCER OF THE BREAST, BODY OF THE UTERUS AND OVARY AND WORK IN THE COIL AND WIRE DRAWING AREA OF THE CGE DUFFERIN ST. LAMP PLANT.

o Finding 1b by Panel Member Chong:

AT THIS TIME, I FIND THE EVIDENCE BETWEEN BREAST AND GYNAECOLOGICAL CANCERS AMONG CWD WORKERS AT THE CGE DUFFERIN ST. PLANT AND THEIR WORKPLACE APPROXIMATELY BALANCED FOR AND AGAINST WORK-RELATEDNESS. RESOLVING THE ISSUE OF PROBABLE CONNECTION BY EPIDEMIOLOGICAL MEANS REQUIRES A STUDY WHICH, AT THE EARLIEST, IS UNLIKELY TO YIELD AN ANSWER BEFORE THE NEXT CENTURY.

Board staff have thoroughly reviewed the IDSP report, submissions, and background documents and the following is the Board's response to Findings 1, 1a and 1b of the IDSP.

Although an association was observed between work in the CWD Department and the development of cancer of the breast, uterus and ovary, the Board believes that there is as yet insufficient evidence to support a probable causal association\*.

The study design used by the Shannon team is not unusual for assessing the nature of an apparent cluster. Given the circumstances at the time and the quality of the data to be evaluated, the statistical and epidemiological methods used in the study were basically valid and were founded on acceptable practice. However, the IDSP raised some concerns regarding the use of index cases\* and the statistical tests of significance.

After a thorough review of the issues surrounding the inclusion of index cases, the Board has determined that ideally the index cases should be excluded from the analysis. However, the Board agrees with Dr. Shannon that there was only one index case and that the results of the study were not greatly affected by the inclusion of this case in the analysis. Dr. Shannon also stated that the results would not be affected greatly if the index case were removed. In regard to the statistical testing issue, Dr. Shannon conducted the analysis in accordance with the stated protocol which was agreed upon by CGE and the union.

In summary, the Board believes that the study methodology was basically valid, although there is some concern regarding the effect of confounding\* on the study results due to the absence of adequate personal and reproductive histories of the study cases and the inability of the researchers to examine other possible causal factors. Aside from the issue of methodology, there are also important issues related to the interpretation of the study results.

To assist in determining whether there is a probable causal association between work in the CWD area and the development of breast and gynaecological cancers, the Board has evaluated the McMaster study in the context of the criteria normally used by epidemiologists:

- strength of the association\*
- biological plausibility\*
- presence of a dose-response gradient\*
- latency\*
- consistency\*
- specificity\*

Each criterion will be considered in turn.

A. Strength of association

With respect to the strength of the association, the findings in the McMaster study indicated that:

- The standardized morbidity ratio (SMbR)\* for the combined sites of cancer of the breast, uterus, and ovary (excluding cervical cancer) was 199. The two-tailed 95% confidence interval\* was 99 and 355, based on 11 cases. With a one-tailed test of statistical significance, the probability that this was a chance finding was less than 5%. (The Board considers a one-tailed test to be appropriate in this case.)
- The SMbR for combined sites of cancer in the high exposure/high latency group was 300. The 95% confidence interval was 129 and 590, based on 8 cases. The probability that this was a chance finding was less than 5%.

- The SMbR for breast cancer alone in the high exposure/high latency group was 323, and the 95% confidence interval was 105 and 753, based on 5 cases. The probability that this was a chance occurrence was less than 5%.

These findings indicate the existence of a moderately strong association between working in the CWD Department and the development of cancer of the breast, uterus and ovary. There is still a small possibility that the findings occurred by chance alone. It is known that these gynaecological cancers are primarily hormonally mediated and that factors such as nulliparity\*, late age at first pregnancy, family history, and late age at menopause strongly increase the risk of developing these cancers. It is also well documented that late age at first pregnancy is more common in women working outside the home compared to the general population. Therefore, it is possible that confounders are operating in this study and that they could account for enough of the observed excess risk to result in the likelihood that the excess is due to chance alone.

It should be noted that there are certain methodological factors which may artificially lower the estimate of risk\* or confounders which may lower the risk of these cancers (e.g., early age at first pregnancy). However, the net effect of all of these biases\* and confounders cannot be quantified with any degree of confidence.

B. Biological plausibility

Although an identifiable causal agent is not a necessary requirement for compensation, it is easier to declare work-relatedness if a causal agent can be found in the workplace. Consequently, Board staff spent considerable time in assessing the possible causal agents identified by McMaster investigators and the IDSP, and in submissions to the Board. This assessment consisted of a review of all MOL reports and other background documents, discussions with CGE staff, and a site visit to the Oakville East Plant.

1. Methylene chloride

The McMaster study investigators identified methylene chloride as a possible cause of the excess cancers in the CWD Department. However, the Board has reviewed the data regarding methylene chloride and agrees with the IDSP

that it is unlikely that exposure to methylene chloride was causing these cancers.

#### Use of methylene chloride

In order to understand the use of methylene chloride, it may be necessary to review the coil and wire drawing process. The coil and wire drawing process is only one aspect of the manufacture of incandescent lamps at CGE, and was concentrated in the CWD Department in the Dufferin St. Lamp Plant.

The first step in the manufacture of coiled filaments for incandescent lamps begins at the wire draw area, where tungsten and molybdenum wires are heated, expanded and pressed through various dies and wire guides for reduction to fine filament wire thickness. The wire is then formed into single coil filaments by winding the wire on a mandrel\* of steel or molybdenum in the coiling machines.

The coil, with the mandrel still in place, is heat treated in annealing furnaces, cut into pieces, baked in a sinter furnace (permanently setting the coiled structures), and finally immersed in an acid bath to dissolve the mandrel out of the coil. There is also a coiled coil (or double coiling) process which involves the same procedure as single coiling except that the single coil with the mandrel is wound on a second mandrel which is later removed mechanically.

In 1959 the company began dipping the ends of certain heavy coils in a solution composed of picco-resin and methylene chloride. This mixture acted as a coating and protected the ends of the mandrel when the rest of the mandrel was dissolved away by acid treatment. The picco-resin/methylene chloride solution sat out on open benches in small containers approximately the size of coffee creamers.

Methylene chloride was also used to remove the remaining picco-resin solution after the mandrel had been dissolved in acid. Approximately 85-90% of the purchased methylene chloride was used for this purpose. This process was carried out in an acid room in the CWD Department under an exhaust hood.

There was concern among union representatives that methylene chloride was also used to clean the machinery and dies in the CWD Department, and that the cans containing the cleaning material and the dies themselves were placed on top of the sinter furnaces.

According to the company, although methylene chloride is known to be an excellent degreaser, it was trichloroethylene (which smells like methylene chloride) that was used for cleaning. In addition, the established procedure for cleaning the dies was to use trichlorethylene inside a safety can. The safety can was 3 inches in diameter and 4 inches in height and had a safety lid.

It cannot be said with certainty that methylene chloride was not used for the purpose of cleaning the machinery and dies. However, this would not have been the acceptable procedure. It would have been possible to place the safety cans or dies on top of the furnace since the furnaces were approximately five feet high. If this occurred, some vapour could have slowly escaped into the room air. However, with room ventilation prevailing in the area, such small amounts of methylene chloride could not build up any detectable concentration in the large air volume of the warehouse.

We do not think that the amount of exposure to methylene chloride (used appropriately or inappropriately) was excessive. In any event, the animal and epidemiologic evidence (see below) leads us to rule out methylene chloride as the causal agent in the CWD Department.

#### Exposure to methylene chloride

There were no monitoring data specific to methylene chloride use. Company reports indicate use of methylene chloride in batches prior to 1985. In 1985, methylene chloride was replaced with n-butyl acetate for which monitoring data are available. Based upon the ratio of vapor pressure of methylene chloride to n-butyl acetate, it is estimated that the short term exposure to methylene chloride could be about 5 ppm, which is well below the applicable exposure limit.

Carcinogenicity of methylene chloride

Studies on animals have shown that methylene chloride induces cancer of the liver and lung in rodents. Although benign tumours were seen in rodents, there is no evidence that methylene chloride induces cancer of the breast, uterus or ovary.

The United States National Institute for Occupational Safety and Health (NIOSH) considers methylene chloride to be a potential carcinogen. Its assessment was based on results for the liver and lung. The International Agency for Research on Cancer (IARC) categorizes methylene chloride as a Group 2B carcinogen. This means that there is inadequate evidence for humans and sufficient evidence for animals. Again, the animal evidence refers to malignant tumours of the liver and lung.

## 2. Thorium

In a joint submission to the Board, the Communications and Electrical Workers of Canada and the United Electrical, Radio and Machine Workers of Canada identified thorium oxide\*, a radioactive material, as a possible causal agent in the CWD Department. They expressed concern that the presence of thorium in the workplace had not been recognized by the IDSP at the time the Panel prepared its report. Accordingly, the Board conducted a thorough review of the thorium issue with particular attention to the nature of thorium use, the time period when it was used, and the location of its use in the plant. This review was based on documents from the Ministry of Labour and Atomic Energy Control Board, supplemented by the findings of an extensive site visit to the Oakville East Plant by the Board Industrial Hygienist and a meeting with the Minister of Labour attended by Union representatives and company officials.

The Board was particularly careful in its review of thorium because breast cancer is known to be associated with exposure to ionizing radiation\* (e.g., as a result of nuclear disasters or therapeutic radiation treatments for chronic mastitis). In addition, thorium injections for diagnostic purposes had been shown to cause liver and lung cancer.

Use of Thorium in the CWD Department

Over the years, thorium has been used in different ways and in different forms in the CGE Dufferin St. Lamp Plant. It plays a minor role in the coil and wire drawing process. Rather, it is part of other processes in the CGE Lamp Plant and was brought into the CWD Department during different time periods for a number of different purposes.

a. 1957-1967

From 1957 to 1967, thorium was used to improve the electrical properties in the arc tubes of mercury vapour lamps. Electrode coils coated with thorium material were purchased from the United States and used only in the Arc Tube Department (located on the first floor of Building # 1) during this period. There was no exposure to thorium in the CWD Department (located in Building # 2 on the third floor).

b. 1968-1970

During this period the Dufferin St. Lamp Plant began producing sunlamps. For this process, metallic thorium strips were purchased from the United States, cut into slivers and then inserted into electrodes. These slivers were inserted into the electrodes of sunlamps in the White Room of the Arc Tube Department. Once the electrodes contained the solid thorium slivers, they were sent to the CWD Department for sintering. There was no potential for exposure to thorium dust. Thorium-containing slivers were baked in the sinter furnaces for approximately 20 days a year.

## c. 1968-1976

In 1968 CWD started to produce electrode coils for use in the Arc Tube Department. These electrodes had previously been purchased from the U.S. The shanks contained 2% chemically fixed thorium.

Mercury vapour lamps continued to be made at CGE. However, during this time period, a new process was introduced. Workers in the emission mix area of the Arc Tube Department applied a thorium oxide liquid suspension to electrodes. This activity was carried out inside a glove box (a ventilated plastic box with hinged doors). The electrodes were then baked in a furnace in the Arc Tube Department. The baking process was moved to the CWD sinter furnaces during 1976 and 1977 because the CWD furnaces permitted better bulk production.

## d. 1976/77-1986

CGE continued to use the same process for manufacturing sunlamps as described above. Only solid thorium was used in this process. No thorium dust was involved.

In the manufacture of mercury vapour lamps, the process for baking the thorium oxide liquid suspension to electrode coils was moved to the CWD Department because of bulk handling requirements. The thorium oxide solution was applied to the coils in the Arc Tube Department. The coils were then sent to the CWD Department for sintering. About four batches were processed a day in one of the two furnaces assigned to thorium processing. It took about twenty minutes for each batch. One person was responsible for this job.

e. 1986 - present

In 1986, the CWD Department was moved to the Oakville East Plant. Only shanks containing 2% chemically fixed thorium are currently being used in the CWD Department. Thorium oxide suspension is confined to the Arc Tube Department in the Oakville West Plant.

Exposure to Thorium in the CWD Department

The Ministry of Labour (MOL) and Atomic Energy Control Board (AECB) inspected the CGE Dufferin St. Lamp Plant on November 22, 1982 and February 17, 1983, respectively. Radiation surveys were conducted in the emission mix process area and the White Room of the Arc Tube Department and throughout the CWD Department.

After a review of all MOL and AECB reports and correspondence, the following points are noted:

Although a number of radiation controls were recommended for the emission mix process, neither the AECB nor the MOL recommended any specific exposure control measures for the sintering furnaces and surrounding areas of the CWD Department. It was recommended, however, that housekeeping measures be improved to achieve maximum health and safety protection.

Low levels of alpha\* activity were detected in dust samples from the sintering furnace area in 1982. (It should be noted that two of these furnaces were used for sintering thorium-containing materials beginning in 1976.) The measurements obtained in this 1982 survey showed a potential exposure to alpha radiation for workers employed near the sinter furnace area, but the exposures were substantially below the allowable limits for radiation

workers, and the exposure to airborne thoron daughters was estimated to be 1/30 the limit for non-radiation workers.

- It was estimated by the MOL that the external beta\*-gamma\* radiation in the area near the sinter furnaces could account for an individual whole body gamma radiation dose of 100 millirems per year. The legal limit for an atomic radiation worker is 5000 millirems per year and 500 millirems per year for non-radiation workers.
- Measurements were also taken in the vicinity of the benches where solid thorium was used. All measurements in this area were at background levels.

The MOL and AECB reports do not indicate the radiation dose to the lung from inhalation. However, an AECB-sponsored study of the personal intake exposure to radioisotopes of workers in two thorium processing facilities in Canada indicated that there were no significant lung uptakes of thorium and its decay products\*. One of these facilities had a sinter furnace similar to those in the CWD Department at CGE.

#### Discussion of Thorium Issue

The first thing noted in the Board review of the thorium issue was that it would have been biologically implausible for thorium to have caused the cancers identified in the McMaster study. In the McMaster study a 15-year latency period for breast and gynaecological cancers was noted. This is consistent with the latency for other occupational carcinogens. Workers who had developed these cancers had started working in the CWD Department prior to 1967. However, thorium was not present in the CWD area in a form where there was the potential for exposure to airborne thorium oxide until 1976 at the earliest. The design of this study, therefore, did not permit the evaluation of thorium as a causal agent in the CWD Department because an insufficient number of years of latency had elapsed.

A review of the other issues regarding thorium indicated the following:

- There are two mechanisms for thorium decay products to reach the tissue of the breast, uterus and ovary: 1) through whole body gamma radiation; and 2) by inhalation of dust particles containing thorium and its subsequent distribution to internal organs.
- Prior to 1976, only solid thoriated tungsten shanks and solid slivers were used in the CWD Department. Based on MOL and AECB reports in 1982 and 1983, measurements were at background levels in the areas where solid thorium was used.
- There was the potential for exposure to alpha radiation through inhalation of dust particles in the CWD Department after 1976 when thorium oxide solution was applied to electrode coils in the Arc Tube Department and baked in the sinter furnaces in the CWD Department. However, in 1982 the exposure to thorium decay products was calculated by the MOL to be extremely low (alpha particles were 1/300 of the allowable limit according to AECB standards for radiation workers and 1/30 for non-radiation workers; gamma radiation levels were 1/50 the allowable limit for radiation workers and 1/5 of the limit for non-radiation workers).
- CGE began using thorium oxide suspension in the Arc Tube Department in 1968. It is clear from the layout of the buildings at Dufferin St. that the Arc Tube Department was well-removed from the CWD Department.

It should be stressed that any possible excess risk from exposure to thorium in the CWD area would not yet be evident because of an inappropriate latency period. We do not believe that there was enough exposure to thorium to cause any cancers at any time. However, should further evidence be uncovered in the future, the Board would then consider a relationship with thorium.

3. Other exposures

A review of the processes and work practices in the CWD area did not reveal any other likely causal agents. Among the possible chemical agents suspected of causing cancer in humans (arsenic, chromium, formaldehyde and trichloroethylene), monitoring results indicated that occupational exposures were well under control and below the applicable exposure limits regulated in Ontario. Potential occupational exposures to other chemicals (e.g., various metallic dusts, carbon monoxide, carbon dioxide, butyl acetate, toluene, ammonia, acid fumes and oxides of nitrogen) were also determined to be well below the applicable exposure limits.

4. Conclusion

With regard to biological plausibility, the Board has not been able to identify a likely causal agent. In addition, there appears to be little evidence in support of a biologically plausible mechanism regarding the work-relatedness of these cancers.

C. Dose-response and Latency

Although an excess risk was observed in a sub-group of workers with long latency and prolonged work assignment in the CWD area, there was insufficient evidence to examine a dose-response pattern because there was only one person in the category of sufficient latency and low exposure.

D. Consistency

In assessing a causal relationship, it is desirable to conduct other studies in occupationally similar groups to demonstrate consistency of results. However, in this case the particular grouping of operations in the CWD area is unique in North America, and it appears to be unlikely that another study could ever be conducted.

E. Specificity

With regard to specificity, the excess cancers occurred in only one department in CGE and only for one group of related cancers. However, it should also be noted that the cancers in question are common in the general population and are most often related to reproductive factors and family history.

In summary, the Board agrees with IDSP Finding 1 that there is insufficient evidence to make a finding of probable connection between the development of breast and gynaecological cancers among CWD workers and work in the CWD area. However, there is a possibility of work-relatedness given that an apparent excess risk was observed in a sub-group of workers with high exposure and long latency.

II. COMPENSABILITY ISSUES

With respect to the issue of compensability the IDSP proposed three options regarding the adjudication of claims arising from the CWD area of the CGE Lamp plant.

o Finding 2 by Panel Members Buck, Chong, LeVay, and Stevens:

ON A CASE BY CASE BASIS, THE BOARD SHOULD ADJUDICATE CLAIMS FOR BREAST, UTERINE AND OVARIAN CANCERS ARISING FROM THE CWD AREA OF THE CGE DUFFERIN ST. PLANT IN THE CONTEXT OF SECTION 3(4) OF THE WORKERS COMPENSATION ACT. EVIDENCE FOR AND AGAINST THE POSSIBILITY OF WORK-RELATEDNESS SHOULD BE TAKEN AS BALANCED WHEN THE CLAIMANT'S MINIMUM EMPLOYMENT PERIOD IN THE CWD AREA IS AROUND 5 YEARS AND THE LATENCY PERIOD IS AROUND 15 YEARS.

o Finding 2a by Panel Members Dupré, Gibson, and Miller:

ON A CASE BY CASE BASIS, THE BOARD SHOULD ADJUDICATE CLAIMS FOR BREAST UTERINE AND OVARIAN CANCERS ARISING FROM THE CWD AREA OF THE CGE DUFFERIN ST. PLANT IN THE CONTEXT OF SECTION 3(4) OF THE WORKERS COMPENSATION ACT. IN THOSE CASES WHERE THE CLAIMANT'S MINIMUM EMPLOYMENT PERIOD IN THE CWD AREA IS AROUND 5 YEARS AND THE LATENCY PERIOD IS AROUND 15 YEARS, EVIDENCE FOR AND AGAINST THE POSSIBILITY OF WORK-RELATEDNESS SHOULD BE TAKEN AS BALANCED ONCE THERE IS EVIDENCE OF CONTINUING EXCESS DISEASE ARISING FROM THE CWD AREA OF THE CGE DUFFERIN ST. PLANT AMONG THESE WORKERS, SUCH AS 4 MORE CASES OF CANCER AT THE SITES OF INTEREST IN THE YEARS 1983 THROUGH 1987.

- o With respect to Finding 2b by Panel Members Gagnon and Jolley:

THE BOARD SHOULD ENTER CANCER OF THE BREAST, BODY OF THE UTERUS AND OVARY INTO SCHEDULE 3 OF THE WORKERS' COMPENSATION ACT, AND THAT CANCER OF THE BREAST, BODY OF THE UTERUS AND OVARY BE DEEMED TO HAVE BEEN DUE TO THE NATURE OF WORK IN THE COILING AND WIRE DRAWING AREA OF THE CGE DUFFERIN STREET PLANT, UNLESS THE CONTRARY CAN BE PROVED.

In its communication with the Panel the Board requested that the IDSP determine whether compensation should be based on a statutory schedule, policy guideline or on a case-by-case basis. The Board agrees with the comments of the Panel in Section 5.2 of its report regarding the development of policy guidelines (eligibility rules). This section reads:

"So as to be credible to all concerned, such generally applicable criteria should rest upon scientific findings that establish a probable connection between diseases and workplaces."

The Board also believes that the statutory schedule should be reserved for those diseases where a high probability of work-relatedness exists. The Royal Commission on Asbestos (RCA) provided further insight on this issue. The RCA stated:

"...we deem it most important not to lose sight of the fact that certain industrial diseases pose no significant question of work-relatedness. A statutory presumption approach to such diseases provides a visible and easily understood line of demarcation."

The evidence in this particular issue regarding work-relatedness is far from clear cut. The IDSP was unable to reach a consensus on whether a probable connection exists, and the Board's own analysis does not support a probable connection based on the current evidence. Thus, it would not be appropriate for the Board to develop a policy guideline or to enter these diseases into the statutory schedule at this time.

In regard to Section 3(4) of the Act, Professor Paul Weiler in his study of industrial diseases provided the following commentary:

"The proposed language in the new Ontario Bill is specific: whenever there is doubt about any claim, and the probabilities are equally balanced, that disposition is to be made which is more favourable to the claim. But this statement of the burden of proof requires a fair balance in the relative probabilities. It would not permit the WCB to compensate all victims of cancer wherever there is any chance, no matter how speculative, that this was due to workplace exposure."

### III. BOARD CONCLUSIONS

Taking these comments into consideration, the following conclusions are made:

First, the Board agrees with the Panel that cervical cancer should not be considered for compensation at this time.

The Board finds that the evidence to date does not confirm a causal relationship between cancer of the breast, uterus, and ovary and work in the CWD Department. However, the Board considers that the evidence supports a possible connection. Given the unique characteristics of the CGE Lamp Plant and the fact that claimants have been waiting for a number of years for a decision on the CGE issue, the Board will develop interim guidelines to be used in adjudicating CGE claims for cancer of the breast, uterus, and ovary. These guidelines will instruct staff to adjudicate these claims on a case-by-case basis, whereby, in the evaluation of an individual claim, the totality of the evidence will be considered.

This evidence consists, in part, of:

- a) The McMaster epidemiological study where an increased risk of developing breast and gynaecological cancers was observed in workers who had the following characteristics:

at least 5 years of work experience in the CWD area of the Dufferin Street plant

and,

at least 15 years between the time of first working in the CWD area and the diagnosis of cancer of the breast, body of the uterus or ovary.

- b) The medical literature regarding breast cancer shows that it is thought to be mediated primarily by hormonal factors, although, other factors have also been identified. The hormonally related factors include nulliparity, late age at first pregnancy, early age of first menstrual period and late onset of menopause. Other factors which may significantly increase the risk of developing breast cancer include family history of the disease, high fat diets and exposure to ionizing radiation. The presence or absence of these factors in an individual affects the probability of whether or not that individual would develop breast cancer.

In summary, the Board is in agreement with the first part of both Findings 2 and 2A (Panel members Buck, Chong, LeVay, and Stevens and Dupré, Gibson, and Miller) that:

**"On a case by case basis, the Board should adjudicate claims for breast, uterine and ovarian cancers arising from the CWD area of the CGE Dufferin St. Plant in the context of Section 3(4) of the Workers' Compensation Act."**

Should new evidence providing support for a probable causal connection between occupational exposure and breast and gynaecological cancers become available, the Board would re-evaluate its position regarding this issue. Depending upon the nature of the evidence, the Board would consider the revision of the Interim Guidelines, the development of a policy or the use of Schedule 3.

December 11, 1989

Note: Board administrators have been instructed by the Board of Directors to undertake a follow-up study of the CWD cohort for the years 1983-1987 to determine whether the excess of cancer of breast, uterus and ovary can be shown to be more definitively related to employment in the Coil and Wire Drawing Department of the CGE Lamp Plant, and to provide a six month progress report.

## GLOSSARY OF TERMS

**Apparent cluster** - A discrete aggregation in a particular time period and in a particular place of a number of cases of one or more related diseases apparently in excess of normal expectations.

**Alpha radiation** - A stream of energetic particles, identical to the helium nucleus, and usually emitted during the radioactive decay of elements such as uranium or thorium. Alpha particles are stopped by the outer skin without any harm. Once taken inside the body, they are damaging to a layer of soft tissue.

**Beta radiation** - When an isotope contains too many neutrons, a neutron is converted to a proton, and beta particles (electrons) are then emitted. Most beta particles are not capable of penetrating through the outer layer of the body, but can cause damage if they gain entry to the body through inhalation or ingestion.

**Bias** - A systematic distortion in the estimate of an epidemiologic measure due to limitations of or error in the study design. Potential bias should be taken into account when assessing the validity of the findings obtained in a study.

**Biological plausibility** - One of the criteria used to assess a causal relationship. If a causal relation is biologically plausible, it is credible according to what is currently known within the principles of biology.

**Causal Association** - A causal association would be recognized to exist whenever evidence indicates that the factors form part of the complex of circumstances that increases the probability of the occurrence of disease and that a diminution of one or more of these factors decreases the frequency of that disease.

Criteria for causation which examine various aspects of an association may be used to help separate causal associations from non-causal ones.

**Confidence interval** - The interval within which the true risk actually lies. For example, if the SMbR is 300 and the 95% confidence interval is 129 and 590, this would mean that, in the long run, if one were to do many studies of the same type, the relative frequency with which the true SMbR actually lies within these limits is 95%. 19 out of 20 of a large series of such a confidence interval actually contain the population SMbR. 1 out of 20 does not.

**Consistency** - One of the criteria used to assess a causal association. Consistency refers to the repeated observation of an association in different populations under different circumstances.

**Confounding** - A type of bias in which distortion in the estimation of risk is caused by a mixture of effects of the exposure under study and an extraneous factor. For example, women with late age at first pregnancy have higher rates of breast cancer. If the women who worked at CGE in the CWD Department had later age at first pregnancy on average than the general female population, some of the increase in breast cancer incidence rates in the CWD workers could be due to this confounding risk factor.

**Decay products** - Alpha, beta and gamma emissions from the presence of radioactive substances.

**Dies** - Small copper ingots used to guide the tungsten wire in the coil and wire drawing process at CGE.

**Dose-response gradient** - A relationship between the amount of exposure and the magnitude of the effect. In occupational studies, length of time working at a particular job or company is often a surrogate for dose.

**Electrodes** - Serve as positive or negative terminals of a cell for the conduction of electrical current.

**Estimate of risk** - Term used by epidemiologists to refer to the statistic used to designate a relationship between an exposure and disease. Examples of estimates of risk are standardized mortality ratio (SMR), standardized morbidity ratio (SMbR), odds ratio, or relative risk.

**Gamma radiation** - Invisible but penetrating rays emitted by the nucleus of certain radioactive atoms during their decay. Gamma radiations are comparable to x-rays. High doses of gamma radiation can penetrate the skin.

**Incidence rate** - The number of new cases of a disease which occur in a group of people in a given time period divided by the person-time at risk.

**Index case(s)** - The original cases which generate a hypothesis and lead to an epidemiologic investigation. New, independent cases should ideally be used to test the hypothesis.

**Ionizing radiation** - Any radiation capable of causing ionization or charged particles and damage to living bodies. In industrial environments, common sources are x-ray machines, nuclear reactors, and alpha-, beta- and gamma-emitting radon progeny.

**Latency** - The time period elapsed since first exposure to a substance and the diagnosis of disease. If cancers occur in a group of people without sufficient latency, it is unlikely that they are due to the exposure studied.

**Mandrel** - A spindle or bar inserted into something to hold it in place while it is being machined.

**Nulliparity** - Refers to the reproductive state of a woman who has never given birth to a viable child.

**Sinter furnace** - The furnace in the CWD Department which was used to fuse grains of thorium oxide to the coil elements under high temperature.

**Solid thoriated tungsten shanks** - Thin rods, made from tungsten containing 2% chemically fixed thorium, used in the production of electrodes for sun lamps and mercury vapor lamps. These shanks or rods were obtained from the United States with 2% thorium already contained in them.

**Standardized Morbidity ratio (SMbR)** - An epidemiologic measure used to estimate the risk of disease. It is the ratio of the observed number of cases of a disease (often in an occupational group) to the number of cases which would be expected in the group if it was experiencing the disease at the same rate as the standard population. An SMR of 1.0 (or 100) indicates an occupational disease rate equal to the rate of the general population. An SMR greater than 1.0 (or 100) indicates an excess of disease, while an SMR less than 1.0 (or 100) indicates a deficit of disease.

**Statistically significant** - Refers to a finding which is unlikely to be due to chance. The degree of unlikelihood is determined by the significance level. For example, if a finding is significant at the 5% level (the most common level in use) then there is less than a 5% probability that it was due to chance.

**Specificity** - One of the criteria used to assess a causal relationship. Specificity requires that a cause lead to a single effect or that an effect be seen in only certain sub-groups. Specificity also refers to the circumstance in which the disease is specific to the exposure.

**Strength of association** - The magnitude of the estimate of risk (e.g., SMR). A large SMR indicates a strong association.

**Thorium oxide** - The form of thorium which occurs in nature.

## CITY OF TORONTO

### APPLICATION FOR SPECIAL LEGISLATION

NOTICE IS HEREBY GIVEN that, on behalf of The Corporation of the City of Toronto, application will be made to the Legislative Assembly of the Province of Ontario, for an Act to provide:

1. That in passing by-laws to allow parking of motor vehicles on designated public streets pursuant to permits issued to the owners of the vehicles (permit parking by-laws), that prior to passing such a by-law, notice of a poll and notice of the Council's intention to pass the by-laws shall be sent to all persons listed on the assessment roll for the land abutting the parts of the highway to be designated, and that provided that a majority of the poll notices received by the City Clerk within one month following the latest date of mailing of the poll is in favour of the proposed by-law, the Council may pass the by-law.

The existing permit parking legislation for the City of Toronto presently requires that before passing a permit parking by-law, notices of the Council's intention to pass the by-law shall be sent to all persons on the last assessment roll for land abutting the parts of the highway to be designated for permit parking, and unless a petition objecting to the passing of the by-law, signed by at least  $\frac{2}{3}$  of the persons entitled to notice, is received by the Clerk within one month of the last date of mailing the notice, the Council may pass the by-law.

2. That where the Council has proceeded under the legislation and has been prevented from passing the permit parking by-law by reason of a majority of poll notices received not being in favour of the passing of the by-law, the council may if it wishes, upon the expiry of two years after the polling period has been completed, again implement the permit parking poll process for that highway.

The present legislation requires that if at least  $\frac{2}{3}$  of the persons entitled to notice petition against the by-law, the Council cannot pass the by-law, and that if the Council is prevented from passing the by-law as aforesaid, it can re-new the process for implement permit parking on that highway after a two year period has passed.

This application will be considered by a Standing Committee of the Legislative Assembly. Any person who has an interest in the application and who wishes to make submissions, for or against the application, to the Standing Committee should notify, in writing, the Clerk of the Legislative Assembly, Queen's Park, Toronto, Ontario M7A 1A2.

    - (iii) construction activities will be restricted to conform with Bylaw No. 1083-88, Township of Ameliasburgh.
  4. The undertaking shall be monitored by the Ministry of the Environment or its agent to ensure that waste management activities do not result in injuries to persons or property.
  5. Where any activity which is the subject of this Order is being carried out as or is part of another undertaking which is the subject of an exemption order under the Act, the activity exempt under this Order shall be carried out in accordance with any terms or conditions in the other exemption order as well as the conditions in this Order.

## MOTOR VEHICLE TRANSPORT ACT, 1987/ LOI DE 1987 SUR LES TRANSPORTS ROUTIERS

### INTRA-PROVINCIAL TRUCK APPLICATIONS:

The following are applications for operating licences under Part III of the Motor Vehicle Transport Act, 1987, S.C. 1987, Chapter 35. These applicants have been found to meet the fitness requirement in like manner to section 6 of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and the provincial transport board for Ontario proposes to issue the licences unless a person, within thirty days of this publication, serves on the Applicant and files with the Registrar of Motor Vehicles with the prescribed filing fee, a written request for a fitness hearing or a public interest test in like manner to Subsection 7(4) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64.

**NOTE:** A person who requests a public interest hearing must, within thirty-nine days of this publication, serve on the Ontario Highway Transport Board a document that makes out a written case to the Board that the granting of the operating authority applied for would be likely to have a significant detrimental effect on the public interest using the criteria set out in subsection 10(1) of the Truck Transportation Act, 1988, S.O. 1988, Chapter 64, and that the request is not frivolously made.

\* Indicates a person who has applied for licences under both Part II and Part III of the Motor Vehicle Transport Act, 1987.
